

Version 6.5.2 Changes		
Change	Impacts	Description
Added Configuration to App/Devices (Installation reliability)	All Devices App	Checks Driver/App versions and notifies if an issue. Updated critical data from previous version. App name adds "Update Available" if there are updates. Run on ANY device or Run/Exit App to update all devices.
Information Logging (user request)	All Devices	Back to a preference to allow turning off.
Energy Monitor (reduce Hub Load)	EM Devices	Modified to eliminate end-of-year loop potential. Change power reporting to 1 watt vice previous .1 watt reporting. If device off, initial sets power to 0; then, will not get power on updates until device is on again. (reduce Hub load)
Dimming Switch preferences (Code correction)	Dimming Switch	Changed to better match Kasa Phone app for fadeOn / Off.
Added attribute RGB (new attribute to capability)	Color Bulb Light Switch	Added new (to capability color) attribute RGB. Added custom command "Set RGB" to allow controlling the device from RGB data.
State Parsing (reduce Hub Load)	All Bulbs Light Switch	Added check for return message change. If not changed, do not process attributes.
App Device Test (troubleshooting)	App	Added device connectivity testing and reporting to the two APP device list pages.
App Ping Test (troubleshooting)	App	1. Added ping for two non-Kasa devices (recommend other Hub and wifi Router as other two). 2. Added ping selection of all devices in the app data base with selection of multiple devices available.
